Richard Miller 0428 849 327

WELCOME

Friends and cattle breeders, welcome to our 18th annual Sterita Park Angus Bull Sale. We take great pleasure in cataloguing 96 bulls at our on-property sale Monday 17th February 2025 – 4pm at the Sterita Park sale complex, Lucindale.

On behalf of the DiGiorgio family, I would like to thank all of last year's purchasers and under bidders for their continued support.

Last year's sale was again a great success with 97 bulls sold to a top of \$30,000 for Powerpoint son SPLT115 to Goolagong Angus and averaging \$9,113. We have used T115 in our 2024 joining program and are looking forward to seeing his progeny on the ground in the autumn. This is again a reflection of the quality and the demand for bulls run under commercial conditions.

This year the bulls will again be auctioned with a video for each bull projected onto the screen. The sale will also be interfaced with

Auctions Plus. Sale lot videos will be available on our website, Angus Australia, and Auctions Plus prior to the sale. To register with Auctions Plus, please see details towards the back of the catalogue.

The bulls offered in this year's sale have demonstrated great constitution and doing ability; a couple of very significant traits which are heritable and arguably as important as any EBV. The notable sire groups are by TeMania Pheasantry P1479, Rennylea Prospect P550, Landfall New Ground N90, Karoo Realist N278, Sydgen Enhance, LT Revered and Bruin Torque.

The 2024 season was one of the most challenging seasons the south east has ever seen. Without any significant rainfall until early July, we had the driest season on record since 1967. We ended up with a fairly average spring to finish lambs and weaners, and thankfully a significant rain end of November

to freshen up the dry land lucerne. Despite the trying year, our commercial and stud females still achieved a 93% conception rate at pregnancy testing which is a testament to the genetics of our herd, and our female selection to optimise fertility.

Our Christmas weaner sale on the 5th of December was again a great success. Our top pen of steers averaged 388kg . A phenomenal result for 8-10mth old weaners considering our dry start and tough conditions. Steers topped at \$4.08, with an average of \$1301.

The final structural assessment of the bulls was conducted in January by accredited assessor Ian Moreland, including a semen test and an evaluation of all the sale bulls. The final weight just prior to the sale will be available for the Field Day. The bulls offered this year again represent a mix of powerful cow bulls and soft easy fleshing heifer bulls. The influence from the Sydgen bred females remains prominent

and a huge factor in the development of the herd.

Being predominantly commercial producers ourselves not only sets us apart from most seed stock enterprises but gives us a very clear insight and understanding of producing commercial cattle. Our genetics are a testament to our discipline and progressive breeding philosophy over many years in the industry.

We are confident that this year's offering will perform consistently under commercial conditions and encourage you to attend our Beef Field Day on Tuesday 11th February and our 18th annual sale on Monday 17th February 2025.

Nanni DiGiorgio

For any enquiries and inspections prior to sale day please contact me on 0428 854 640.

SALE DETAILS

Monday 17th February 2025
Commencing at 4:00pm

LOCATION

Sterita Park sale complex is located on property on the corner of Coles-Spence Road and Naracoorte-Lucindale Road. Please enter via the gates on Coles-Spence Road. Undercover seating facilities are provided. Sale cattle may be inspected from 12:00pm on sale day or at any other time by arrangement.

SELLING SYSTEM

Sale of animals will be conducted under normal auction conditions using the bid card system of identification. The bulls will be auctioned with a video for each bull projected onto the screen. Buyers must register with selling agents prior to sale commencement. All bulls are sold exclusive of GST. Successful purchasers are required to ensure the Buyers Instruction Slip is completed for delivery instructions and transfer of ownership details.

ONLINE BIDDING

Sterita Park bull sale will be interfaced with Auctions Plus as an alternative bidding option if you are unable to attend the sale in person. However, it is only available to registered users. We recommend registering online at least 24 hours prior to the sale. To register with Auctions Plus, please see details towards the back of the catalogue.

REBATES

A 4% rebate commission is offered to outside agents introducing buyers 24 hours prior to the sale in writing to Nutrien Naracoorte and settling within seven days of invoice. Please contact Nick Heffernan on 0439 157 398.

OCCUPATIONAL HEALTH AND SAFETY

The viewing pens at Sterita Park have been designed so that it is not necessary to enter the pens for inspections. All persons entering bull pens do so at their own risk. Please, no children or prams allowed around the viewing pens.

DELIVERY

Sterita Park will provide a free freight service within 100km radius of the sale complex. Bulls will be delivered as soon as possible following the sale.

INSURANCE

We highly recommend you insure your bulls with your usual insurance firm immediately. A Nutrien Insurance representative will be present at the buyer registration area prior to the sale commencing to assist with insurance if required.

SEMEN INTEREST

Sterita Park will retain 50% interest in the semen rights of all bulls. The purchaser has full possession of the bull and responsibility for the bull and all semen used in its herd. Sterita Park shall retail all rights in respect of sales and marketing of semen. Sterita Park is prepared to negotiate alternative arrangements with prospective purchasers prior to the sale.

CATERING

The DiGiorgio family invite you to join us at the completion of the sale for a BBQ at the sale complex.

BULL HEALTH

All bulls have been double vaccinated with 7 in 1, Pestigard and Vibrio, drenched with Dectomax in May and September 2024, and given oral all-trace boluses in September 2024.

GENETIC CONDITIONS

All sale bulls have been tested for AM, NH, CA and DD prior to the sale. All non carriers are either AMF, NHF, CAF and DDF (tested free of the gene) or AMFU, NHFU, CAFU or DDFU (pedigree free of the gene). All lots are clearly marked with their respective genetic status. If by chance there is still a % remaining on any sale lots due to unforeseen circumstances, Sterita Park will guarantee the animal until completion of testing at the cost to Sterita Park if requested by the purchaser.

GENOMICS

All sale bulls have had genomics DNA testing to enhance the accuracy of the EBVs. All sale bulls have been DNA verified to the sire at least and in some cases to the dam as well. The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia. **PV:** both parents have been verified by DNA **SV:** the sire has been verified by DNA **DV:** the dam has been verified by DNA

STRUCTURAL ASSESSMENT

All sale bulls have passed a structural soundness examination conducted by accredited assessor Ian Moreland (5012) of Studcare Genetics.

SEMEN TESTING

All sale bulls have passed a thorough fertility examination in January 2025 by Ian Moreland. All bulls passed the minimum standard for concentration, motility and progressive motility. It is important to understand that semen testing is not a guarantee of the long term fertility or infertility of a bull. During joining, we recommend regular serving inspections, and if single sire mating, rotate bulls between mobs midway through the season.

STERITA PARK GUARANTEE

These bulls have been raised under commercial conditions and to the best of our knowledge are in excellent health and sound working order.

In the first breeding season if a bull should prove infertile or unable to serve cows naturally (provided it is not caused by injury or disease contracted post sale), Sterita Park will provide a satisfactory replacement or issue a full credit (minus salvage value).

DISCLAIMER

All reasonable care has been taken to ensure that the information provided in this catalogue is correct. However, the vendor and the selling agent do not assume any responsibility for the correctness, use or interpretation of the information included in this catalogue.

STERITA PARK BREEDING OBJECTIVES

Sterita Park is committed to a balanced breeding approach.

The key to commercial success is balancing fertility and performance traits in order to sustainably maximise production and long term performance.

This graph from our January '25 genetic benchmarking report outlines our current genetic position of all our breeding females.

We believe that low maintenance cows have positive fats, and selecting for this will always have an antagonistic effect on retail beef yield.

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Maternal	MCH	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
	MBC	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

Information provided by the Angus Society.

BRINGING HOME A NEW BULL

When purchasing a bull, care and handling after the sale can be as important as the purchase itself.

Looking after your bull well during the initial stages of his working life may ensure longevity and success within your breeding herd

PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled.

Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering.

After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed.

Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

IF YOU USE A PROFESSIONAL CARRIER

- Make sure the carrier knows which bulls can be mixed together.
- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows.

Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments.

If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year.

Complete the vaccinations 4 weeks before joining.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later.

Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MATING NEW BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straightbred and cross bred producers finding success in

Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

Information is provided by the Department of Primary Industries NSW. For further information visit the DPI web site: www.dpi.nsw.gov.au. or www.angusaustralia.com.au. Further reading - Buying Angus Bulls

Angus Australia

Disclaimer and Privacy Information

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

Buyers option to opt out of disclosing personal information to Angus Australia

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents _____

from member _____ (name) do not consent to Angus Australia using my name address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.
